COMPETITION ORIENTATION

RR INTEL // SEASON IV

Competition Scenario

Welcome to the FBI Joint Task Force.

You have been read in on a notorious fixer's criminal intelligence and trading network, now operating under federal control as RR Intel (rrintel.internal).

Your task force must keep RR Intel's systems online and secure: the RR Intel Marketplace and the Operations Portal must stay running so the network keeps producing intelligence.

Rogue operatives are already inside. Resources are limited.

RR Intel Network

HOST	IP	OS	ROLE
blacklist	172.21.0.101	Debian 13	Database
concierge	172.21.0.102	Fedora 43	Web
cabal	172.21.0.103	Windows Server 2022	Domain Controller
thebox	WAN .1.2/30 · LAN .254	pfSense	Firewall

Challenge Format

- **CCS – Find-and-Fix (20%)**
 - Similar to CyberPatriot / Hivestorm. The CCS agent runs on your boxes and gives live scoring feedback.
- Categories: forensics, malware removal, auditing, hardening
 - Focus on **IMPORTANT** security vulnerabilities
 - Not MP3 files
 - Malware **HEAVY**

Challenge Format (cont.)

Injects (35%)

- Business memos from the task force issued as tasks during the competition
- Delivered through the inject portal, monitor it for new injects
- Submit a manual PDF for each inject; graded manually after the competition
 - PLEASE SUBMIT A PDF
- Injects are due by a set time

Challenge Format (cont.)

Scored Services (35%)

- 7 scored services: SSH, HTTP, and DNS
- Keep them running and accessible
 - Must maintain CONTENT and FUNCTIONALITY
- Polled by the scoring engine at random intervals
- Web checks verify login + functionality
 - Static HTML will NOT work.
- Almost all checks use AD authentication (rrintel.internal)
- Scored externally
 - The scoring engine changes and re-uses IPs

Challenge Format (cont.)

Orange Team (10%)

- The Orange Team is automated users hitting the RR Intel Operations Portal
- They submit tickets and expect timely replies
- Responses will be graded manually after competition.
- Their login credentials are pulled from **your password-change submissions**
- **If a user can't log in to submit a ticket or can't get a reply in reasonable time -> you lose points**
- **If the service changes too much from baseline to the point automation breaks, you lose points**

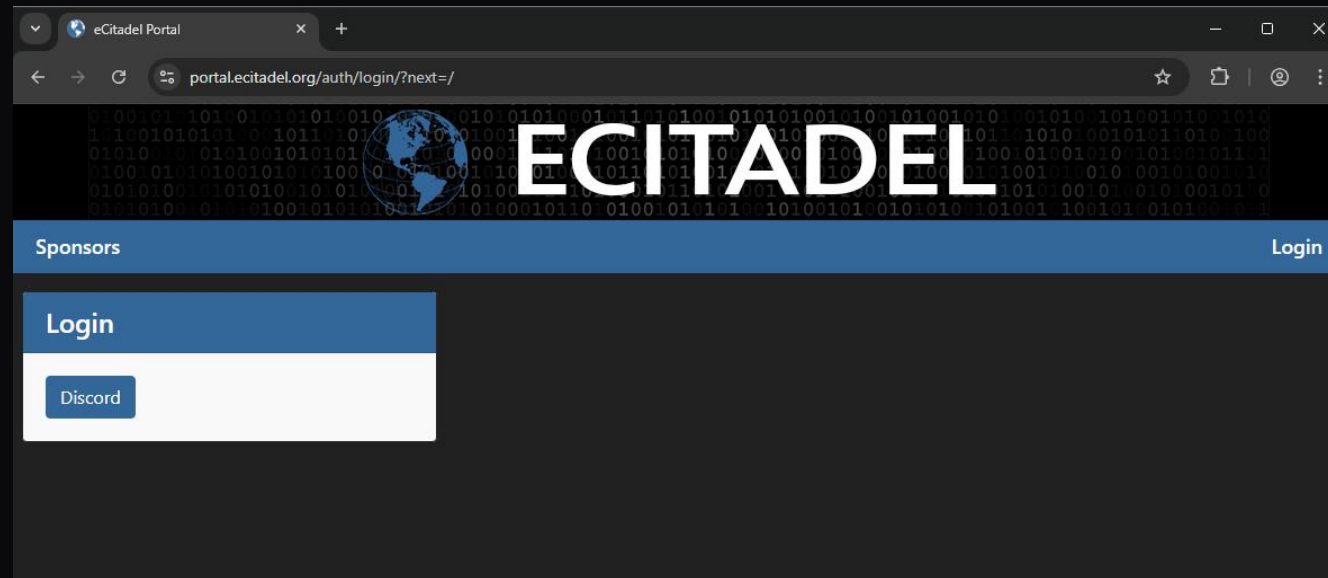

Change Your Passwords

Rotate credentials and tell the scoring engine

- Every default and shared credential is assumed compromised
- Submit each password change through the portal as an **inject**
- The scoring engine then updates creds for **service checks AND Orange Team logins**
- Submissions are automated and **rate-limited**
- **Format must be EXACTLY correct or the submission is discarded**

Team Portal

- You will be using a web portal to access virtual machines
- Must use Google Chrome (Firefox has some incompatibilities)
- Navigate to <https://portal.ecitadel.org>

Team Portal (cont.)

- VMs Tab

Selected ▾

25 ▾ entries per page Search:

☐ Folder	↕ Name	↕ State	↕ CPU	↕ Memory	↕ Console
☐ Team00	cp17_sf_deb10_team00	▶ Powered On	0.03 GHz	0.15 GB	
☐ Team00	cp17_sf_win11_team00	▶ Powered On	0.00 GHz	0.00 GB	
☐ Team00	cp17_sf_win2003_team00	▶ Powered On	0.00 GHz	0.00 GB	
☐ Team00	cp17_sf_win2008_team00	▶ Powered On	0.00 GHz	0.00 GB	

Team Portal (cont.)

- Open Web Console

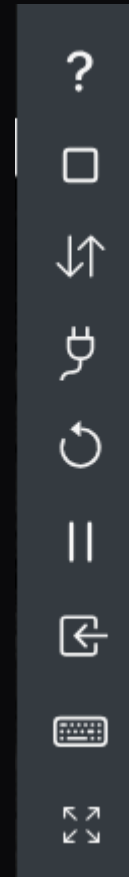

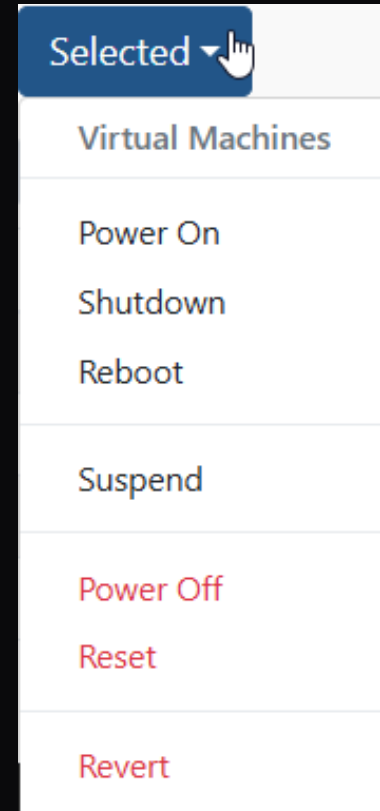

The screenshot displays the ECITADEL Team Portal interface. The header features the ECITADEL logo and a navigation bar with links: Scoreboard, Injects, Announcements, CCS Agent, Scoring, VMs, and Sponsors. The user is logged in as team00. The main section is titled 'Virtual Machines' and contains a table of VMs. A red box highlights the 'Open Web Console' button next to the first VM entry.

Folder	Name	State	CPU	Memory	
Team00	cp17_sf_deb10_team00	Powered On	0.00 GHz	1.80 GB	Open Web Console
Team00	cp17_sf_win11_team00	Powered On	5.42 GHz	3.72 GB	Open Web Console
Team00	cp17_sf_win2003_team00	Powered On	0.00 GHz	1.86 GB	Open Web Console
Team00	cp17_sf_win2008_team00	Powered On	0.00 GHz	1.84 GB	Open Web Console

Team Portal (cont.)

- Power on
- Shutdown, power off
- Reboot, reset
- Suspend
- Revert to Snapshot
- Send Ctrl+Alt+Del

Team Portal (cont.)

- You only have access to your team's virtual machines
- Limited Privileges
 - Revert to snapshot
 - You cannot take new snapshots
 - Power On
 - Open Web Console
 - Green arrow means VM is powered on
- Do NOT need approval for any actions on your VMs

Team Portal (cont.)

- Reverting to snapshot is like pushing a start over button
 - VM goes back to original configuration
 - Remember to power VM up after reverting
 - Only 4 reverts total without penalty
 - Penalties due to reverts NOT displayed
 - **Lose ALL CHANGES AND WORK**
 - **Lose ALL CCS POINTS from changes**
 - **Service Points and SLA points are NOT lost/reset**

Team Portal (cont.)

- Scoring->Services
- Service status graphic
 - Red is BAD
 - Green is GOOD
- Updated after each scoring round check
 - Every 2 - 3 minutes
- After the fact picture
 - NOT real-time!

Notes on Service Scoring

Points per service, per check

- Services are polled at random intervals (no fixed round timer)
- Non-SSH check up & functional = 3 points
- SSH check up = 1 point
- Service down (or failing content/functionality) = 0 points

SLA violations

- Down for 5 consecutive checks = penalty of 3× the points (15 for non-SSH, 5 for SSH)
- Applied every time an SLA occurs (non-overlapping windows); one good check resets the counter; each service counted separately

Notes on Service Scoring

1:1 NAT is in place (172.27.0.0/16)

- Internal address 172.21.0.0/24
- External address 172.27.x.0/24 (x = your team, 1-210)
- Scored externally
 - services must be up and reachable via the EXTERNAL IP

Dual pfSense transit network 172.21.1.0/30

- .1 = upstream router (OUT of scope)
- .2 = thebox WAN
- .3 = practice round firewall

Services depend on each other across machines

- Reverting the box with web servers might not fix the web servers.
- Maybe the database is offline.

Red Team

Rogue blacklists an automated Red Team attacking your systems

- Hostile agents who use pre-planted malware, attacking on a phased timeline
- They can delete content, stop/disable services, and export data (e.g. passwords)

Red Team is a PENALTY category

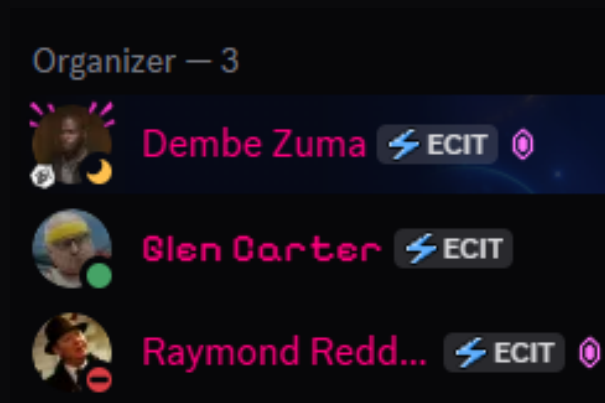

- Continued compromise costs you points
- File IR reports to earn points back

Blocking traffic is your call

- Do NOT block entire subnets
- Any action that disrupts scoring will cost you
- Do NOT use anything sensitive on the environment

Operations Team

- Discord is your primary interface to Operations Team
- Alert organizers about technical issues using #create-ticket

Cautions

Scanning rules – read carefully

- Never scan .1 or .2 addresses, especially those on your subnet
- Do NOT try to scan other teams
- Do NOT try to scan or poke the Red Team
- Do NOT scan systems that are not your VMs or part of an inject
- All internet traffic is monitored, logged, and reviewed
